

## Agri-Industrial Plastics Company Continues to Expand Production Capacity with Additional 6-Layer Fuel Tank Machine

Fairfield, Iowa, June 15, 2009, – Agri-Industrial Plastics Company (AIP) will be accepting another 6-layer fuel tank machine in early August to compliment their current machine, doubling the production capacity of fuel tanks for ATV, snowmobile, watercraft, golf cart, lawn & garden and the small to medium sized engine market. Their new KBS241 will have a CP450 6-layer head with a maximum output of 1985 lbs per hour of HDPE. Using a single clamp and robotic parison transfer, it has today's most sophisticated technology to optimize their production necessities. With this latest addition, AIP will have a total of 22 production blow molding machines.

AIP began manufacturing non automotive multilayer fuel tanks in 2005 to meet the more stringent permeation requirements enforced by the EPA in the United States. Since going down this path, their business has now required additional equipment to meet greater demand. The 6-layer plastic fuel tank has long been accepted as the favored way to meet permeation requirements as well as conform to the demanding form and function necessary in the automotive market.
